ALLTRACK R-Hybrid Series Power Wheelchair Models

Supplier: This Owner’s Manual must be given to the wheelchair user.

User: Before using this wheelchair, please read this entire Owner’s Manual and save it for future reference.
I. INTRODUCTION

AMYLIOR LISTENS

Thank you for choosing an Alltrack power wheelchair. We want to hear your questions or comments on this Owner’s Manual, the safety and reliability of your power wheelchair and the service you receive from your authorized AMYLIOR supplier. Please feel free to write or call us at the address and telephone number below:

AMYLIOR
Customer Service Department
AMYLIOR INC.

USER WARNING

WARNING

Notice to users. DO NOT operate this power wheelchair without initially reading the Owner’s Manual. If you do not understand some of the instructions and warnings contained in this Manual, please contact your authorized supplier or a qualified technician prior to operating your Alltrack power wheelchair. Not doing so, may result in damage and/or injury.

WARNING

Notice to authorized suppliers and qualified technicians. DO NOT operate or service the power wheelchair without initially reading this Owner’s Manual. If you do not understand some of the instructions and warnings contained in this Manual, please contact the AMYLIOR Technical Service Department prior to operating and/or servicing this Alltrack power wheelchair. Not doing so, may result in damage and/or injury.

WARNING

### Seat Lift (Option)
- 11’’ (280 mm) elevation
- 300 lb or 400 lb (135 or 180 kg) max user weight capacity

### Tilt (Option)
- 50° CG lift up to 400 lb (180 kg) capacity

### Battery Charger
- 8 amp off-board

### Drive Wheels
- 14” x 3” (355 mm x 75 mm)
- Optional 14” x 2” (320 mm x 75 mm)
- Optional 14” x 4” (355 mm x 100 mm)

### Caster Fork
- Standard fixed

### Caster Tire
- Standard fixed joystick (right or left hand mount)
- Optional swing-away mount with multi-axis adjustability

### Seat Width Range
- Adjustable from 15” to 20” (380 mm to 510 mm)
- 14 to 24” (455 mm to 610 mm)
- Adjustable from 24” to 26” (610 mm to 660 mm)
- Custom width available

### Seat Depth Range
- Adjustable from 15” to 22” (380 mm to 560 mm)
- Custom depth available

### Back Cane Height
- Adjustable from 15” to 22”
- 24” (455 mm to 660 mm)
- Custom depth available

### Contour Backrest
- 3” (75 mm) Custom depth available
- 2” (50 mm) Custom width available

### Footrest
- Standard swing-away footrests
- Heavy-duty footrests
- Power elevating & articulating footrests
- Angle adjustable and foldable
- Angle adjustable footplates
- Heel loops
- Calf pads
- Adjustable knee to heal length

### Contour Backrest
- Solid one-piece foot platform
- Angle adjustable split footplates
- Power elevating & articulating footboard
- Calf pads
- Adjustable knee to heal length

### Footrests
- Standard swing-away footrests
- Heavy-duty footrests
- Power elevating & articulating footrests
- Angle adjustable and foldable
- Angle adjustable footplates
- Heel loops
- Calf pads
- Adjustable knee to heal length

### Power Elevating & Articulating Footboard
- Calf pads
- Adjustable knee to heal length

### NOTE
- Other “Warnings” will appear throughout this Owner’s Manual as well as on the power wheelchair, where applicable. The following “Warnings” and potential hazards to look for. It is important to read and understand all

### Specifications
- May vary depending on your configuration.

### Power Wheelchair to Your Ability

### Before using this power wheelchair, you and each person who may assist you, should read this entire Owner’s Manual and follow all instructions. Review all warnings and notes often until they become top of mind.

### Federal Law restricts this device to be ordered/sold only by a practitioner licensed to ensure that your power wheelchair.

### Safety and Comfort Options

#### 1. Weight Capacity
- Max user weight capacity

#### 2. Seat Depth
- Custom depth available

#### 3. Seat Width
- Adjustable width available

#### 4. Seat Height
- Adjustable height available

#### 5. Optional Reclining Footrest
- Available

#### 6. Optional Reclining Seat Pan
- Available

#### 7. Optional Reclining Backrest
- Available

- Available

#### 9. Optional Reclining Caster Fork
- Available

#### 10. Optional Reclining Drive Wheels
- Available

#### 11. Optional Reclining Battery Charger
- Available

### Batteries

#### General Warnings

### IV. Notice – Read Before Use

#### A. Choosing the Right Power Wheelchair & Safety Options

### AMYLOR has a wide range of Alltrack power wheelchairs with different styles, sizes and settings to meet the user’s needs. Ultimately, the final selection of a wheelchair rests solely with you and your healthcare professional. The following individual characteristics must be considered when choosing a power wheelchair:

1. **Height & weight (size)**, disability, strength and balance coordination.
2. **Intended use and level of activity**.
3. **Type of hazards to overcome daily (areas likely used by the wheelchair)**.
4. **Safety and comfort options** (such as positioning belts or specialty seating systems).

#### B. Adjusting Power Wheelchair to Your Ability

### Work with your doctor, nurse or therapist and your authorized supplier to ensure that your power wheelchair has the appropriate settings to suit your level of function and ability.

### C. Review This Owner’s Manual Often

### Before using this power wheelchair, you and each person who may assist you, should read this entire Owner’s Manual and follow all instructions. Review all warnings and notes often until they become top of mind.

### D. Caution

### Federal law restricts this device to be ordered/sold only by a practitioner licensed to ensure that your power wheelchair.

### E. Warnings

#### 1. Section V. EMI
- This section contains descriptions of distinctive features for this power wheelchair. Discuss best options and settings with your authorized supplier and healthcare professional for maximum safety.

#### 2. Section VI. GENERAL WARNINGS
- This section contains a safety checklist to follow and a description of various risks to be aware of prior to operating this power wheelchair.

#### 3. Section VII. WARNINGS – COMPONENTS & OPTIONS
- This section contains descriptions of distinctive features for this power wheelchair. Discuss best options and settings with your authorized supplier and healthcare professional for maximum safety.

#### 4. Section X. BATTERIES
- This section contains battery and charging safety to avoid injury.

### NOTE
- Other “Warnings” will appear throughout this Owner’s Manual as well as on the power wheelchair, where applicable. The following “Warnings” and potential hazards to look for. It is important to read and understand all

### WARNING
- These warnings must be followed. Not doing so, may cause personal injury or may damage the power wheelchair.

### PROHIBITED!
- These prohibited actions must NEVER be performed. Executing such actions may cause personal injury or damage to the power wheelchair.

### NOTE
- Other “Warnings” will appear throughout this Owner’s Manual as well as on the power wheelchair, where applicable. The following “Warnings” and potential hazards to look for. It is important to read and understand all

### ESD
- Be aware that electrostatic discharge has the potential of damaging electronic components unless handled properly. The ESD icon prompts the user to refer to the proper related document to manage the situation.
A. WHAT IS EMI?

1. EMI means: electromagnetic (EM) interference (I).

2. EMI can cause your power wheelchair, without warning, to:
   - Move by itself
   - Move in unintended directions
   - If any of these occurs, it could result in severe injury to you or others.

3. EMI can damage the control system of your power wheelchair. This could create a safety hazard, and lead to costly repairs.

4. EMI means: electromagnetic interference (EMI) emitted from sources such as radio stations, TV stations, amateur transmitters and transceivers. (A “transceiver” is a device that both sends and receives radio wave signals).

5. If unintended movement occurs, turn your power wheelchair off as soon as it is safe.

6. EMI comes from radio wave sources such as radio transmitters and transceivers.

7. Beware of the danger from hand-held transceivers. NEVER turn on or use a hand-held transceiver while power to your wheelchair is on. Use extra care if you believe that such a device may be in use near your power wheelchair.

8. Be aware of nearby radio or TV stations, and avoid coming close to them.

9. If unintended movement occurs, turn your power wheelchair off as soon as it is safe.

B. WHAT EFFECT CAN EMI HAVE?

1. EMI can cause your power wheelchair, without warning, to:
   - Move by itself
   - Move in unintended directions
   - If any of these occurs, it could result in severe injury to you or others.

2. EMI can damage the control system of your power wheelchair. This could create a safety hazard, and lead to costly repairs.

C. SOURCES OF EMI

The sources of EMI fall into three broad types:

1. Hand-held transceivers:
   - The antenna is usually mounted on the unit. These include:
     - Citizens band (CB) radios
     - "Walkie-talkies"
     - Security, fire and police radios
     - Cellular phones
     - Laptop computers with phone or fax
   - Other personal communication devices

2. Medium-range mobile transceivers:
   - NOTE - These devices can transmit signals while they are on, even if they are not in use.
   - These include two-way radios used in police cars, fire trucks, ambulances and taxi cabs. The antenna is usually mounted on the outside of the vehicle.

3. Long-range transceivers:
   - These include commercial radio and TV broadcast antenna towers and amateur (HAM) radios.
   - NOTE - The following are not likely to cause EMI problems:
     - laptop computers (without phone or fax), cordless phones, cell phones, TV sets or AM/FM radios, CD or tape players.

D. DISTANCE FROM THE SOURCE

EM energy rapidly becomes more intense as you get closer to the source. For this reason, EMI from hand-held devices is of special concern. (See C. SOURCES OF EMI above)

A person using one of these devices can bring high levels of EM energy very close to your power wheelchair without you knowing it.

E. IMMUNITY LEVEL

1. The level of EMI is measured in volts per meter (V/m).

2. It is believed that a 20 V/m immunity level will protect you knowing it.

3. The tested configuration that was found to be immune to at least 20 V/m is:
   - Alltrack power wheelchair with a right-hand mounted remote joystick system, 18" (460 mm) seat width, 18" (460 mm) seat depth, dual post height adjustable armrests, fixed center mount legrest with one-piece solid footplate, and Group 24 gel cell batteries.

4. The following specialty input devices have an unknown effect on the immunity level because they have not been tested with the Alltrack remote joystick module system:
   - Sip & puff
   - Proximity head array
   - Proportional head control
   - Proportional compact joystick
   - Proportional micro joystick
   - Chin control
   - Heavy duty joystick
   - Buddy button
   - Micro Light switch
   - Other personal communication devices

F. REPORT ALL SUSPECTED EMI INCIDENTS

You should promptly report any unintended movement of your power wheelchair. Be sure to indicate whether there was a radio wave source near your power wheelchair at the time.

Contact: AMYLOR’s Customer Service Department at (888) 453-0311.

G. EMI FROM POWER WHEELCHAIR

Electromagnetic field emitted by electronic components included in this power wheelchair may interfere with other electronic devices emitting similar field, such as shopping mall alarm systems.
A. NOTICE TO USER AND ATTENDANTS

1. Before using this power wheelchair, you should be trained in its safe use by your health care professional.
2. Every power wheelchair is different. Take the time to learn the feel of this wheelchair before you begin using it.
3. Be aware that you must develop your own methods for the safe use of this wheelchair, which are best suited to your level of function and ability.
4. Have someone help you practice bending, reaching and transfers until you learn how to do them safely.
5. NEVER try a new maneuver on your own unless you are sure it is safe.
6. Get to know the areas where you plan to use your power wheelchair. Look for hazards and learn how to avoid them.
7. ALWAYS wear a positioning strap.
8. DO NOT use your power wheelchair if the joystick does not spring back to the neutral position.
9. DO NOT use your power wheelchair if the joystick rubber gaiter is ripped or damaged.
10. DO NOT try to tip your power wheelchair without an attendant present.

B. WEIGHT LIMIT

1. The user and items carried should NEVER exceed the total weight capacity identified on your power wheelchair.
2. NEVER use this power wheelchair for weight training if the total weight (user and additional weights) exceeds weight capacity.
3. Exceeding the weight limit is likely to damage the seat, power seating options, frame, or fasteners and may cause severe injury to you or others around the damaged wheelchair.
4. Exceeding the weight limit will void the warranty.

C. POWER MODULE SETTINGS

If your environment or your level of function and ability change, you may need to get the settings on your wheelchair’s power module adjusted. Your authorized supplier is best suited to adjust these settings.

Contact your authorized supplier to adjust the power module settings immediately if you notice any change in your ability to:
- Control the joystick
- Hold your torso erect
- Avoid running into objects.

D. EMI

Read Section V on EMI. To reduce the risk of unintended power wheelchair movement:
1. NEVER turn on or use a hand-held transceiver while power to your wheelchair is on. Use extra care if you believe that such a device may be in use near your power wheelchair.
2. Be aware of nearby radio or TV stations, and avoid coming close to them.
3. If unintended movement occurs, turn your power wheelchair off as soon as it is safe.
**WARNING**

G. WHEN SEATED IN A PARKED

POWER WHEELCHAIR

1. ALWAYS turn off all power to your wheelchair when you are parked, even for a moment. This will prevent:
   - Accidental movement from contact with the joystick by you or others.
   - Unintended movement from EMI sources. (See Section V).

2. Make sure that people who help you (for example, store clerks) are aware of the joystick and DO NOT touch it. If they do, your wheelchair may move suddenly when you do not expect it.

**WARNING**

H. ENVIRONMENTAL CONDITIONS

Your power wheelchair is not designed for use in a heavy rain storm, or in snowy or icy conditions.

1. Contact with water or excessive moisture can cause a malfunction.
   - When in doubt, have someone help you.
   - Do so only if you are sure it is safe.
   - Stop if one or both main wheels lose traction. If this occurs, you may lose control of your wheelchair or fall.
   - NEVER operate your wheelchair on a slope or ramp if there is snow, ice, water or an oil film present.

**WARNING**

I. TERRAIN

- This power wheelchair will perform at optimum on firm, even surfaces such as concrete, asphalt and indoor flooring.
- Although equipped with suspension, the performance can be substantially reduced on uneven surfaces and rough terrain.
- DO NOT operate the power wheelchair on sand, loose gravel or soil. Doing so may damage wheels, bearings, axles, motors or loosen fasteners.

**WARNING**

J. STREET USE

In some areas, power wheelchairs are not legal for use on public roads. Be alert to the danger of motor vehicles on roads or in parking lots.

1. DO NOT operate this power wheelchair on any roads that do not allow non-motor vehicle traffic.
2. When visibility is limited by either darkness or weather conditions, DO NOT operate the power wheelchair on any roadways.
3. It may be hard for drivers to see you. Make eye contact with drivers before you proceed. When in doubt, yield until you are sure it is safe.

**WARNING**

K. MOTOR VEHICLE SAFETY/TRANSPORT USE

Your power wheelchair has been manufactured with built-in transport brackets.

The standard transport brackets have not been crash-tested in accordance with WC-19. Use these transport brackets only to secure an unoccupied power wheelchair during transport:

1. NEVER let anyone sit in the wheelchair while in a moving vehicle.
2. NEVER transport the wheelchair in the front seat of a vehicle. It may shift and interfere with the driver.
3. ALWAYS secure the wheelchair so that it cannot roll or shift.
4. DO NOT use a power wheelchair that has been involved in a motor vehicle accident.
5. For information concerning approved WC-19 tie down systems, please consult WC-19 Manual.

**WARNING**

L. CENTER OF GRAVITY (CG)

The point where a power wheelchair will tip forward, back, or to the side depends on its center of gravity and stability.

The center of gravity is affected by:

1. The seat height and seat angle.
2. A change in your body position, posture or weight distribution.
3. Using the wheelchair on a ramp or slope.
4. The use of a back pack or other options, and the amount of added weight.
5. Drive wheel positioning.

To reduce the risk of a fall or tip-over:

Whenever a condition exists that may change the center of gravity, reduce speed, proceed cautiously, and when in doubt, ALWAYS have someone help you.

**WARNING**

M. TRANSFERS

It is dangerous to transfer on your own. It requires good balance and agility. Be aware that there is a point during every transfer when the wheelchair seat is not below you.

1. ALWAYS turn off power before you transfer to or from your wheelchair. If you leave the power on, you may touch the joystick and cause your wheelchair to move when you do not expect it.
2. Make sure freewheel/brake release levers are engaged. This keeps the power wheelchair from moving when you transfer.
3. Work with your health care professional to learn safe methods.
4. Learn how to position your body and how to support yourself during a transfer. (See Fig. 1 below for recommended transfer position).
5. Have someone help you until you are sure you can safely transfer on your own.
6. Move your wheelchair as close as you can to the seat you are transferring to. If possible, use a transfer board.
7. Rotate the front casters until they are as far forward as possible.
8. Be careful of the footrests. If you can, remove or swing them out of the way.
9. NEVER stand on footrests when you transfer. Doing so may damage them or cause your wheelchair to tip.
10. Make sure your feet do not get hooked on or caught in the space between the footplates.
11. Make sure armrests do not interfere.
12. Transfer as far back onto the seat surface as you can. This will reduce the risk that you will miss the seat or fall.

**Figure 1. Use caution when transferring to and from your wheelchair.**
N. GENERAL WARNINGS

VI. DRESSING OR CHANGING CLOTHES

WARNING

Obstacles you may have to overcome daily include door thresholds, lifts, ramps and hazards such as potholes and broken pavement. (See Fig. 2 below). These can damage your power wheelchair and may cause a fall, tip-over or loss of control.

1. Be aware that thresholds are very dangerous. (Even a small change in height may stop a caster wheel and cause your wheelchair to tip). You may need to:
   • Remove or cover threshold strips between rooms.
   • Install a ramp at entry or exit doors.

2. Keep your eyes moving when you move around; scan the area well ahead of your wheelchair.

3. Make sure the floor areas where you use the wheelchair are level and free of obstacles.

P. OBSTACLES

WARNING

Obstacles you may have to overcome daily include door thresholds, lifts, ramps and hazards such as potholes and broken pavement. (See Fig. 2 below). These can damage your power wheelchair and may cause a fall, tip-over or loss of control.

1. Be aware that thresholds are very dangerous. (Even a small change in height may stop a caster wheel and cause your wheelchair to tip). You may need to:
   • Remove or cover threshold strips between rooms.
   • Install a ramp at entry or exit doors.

2. Keep your eyes moving when you move around; scan the area well ahead of your wheelchair.

3. Make sure the floor areas where you use the wheelchair are level and free of obstacles.

Q. DRIVING IN REVERSE

WARNING

Use extra care when you operate your power wheelchair in reverse. You may lose control or fall if one of the rear wheels hits an object.

1. Operate your wheelchair slowly and at an even speed.
2. Stop often and check to make sure your path is clear of obstacles.

R. RAMPS, SLOPES & SIDEHILLS

WARNING

The center of gravity of your power wheelchair changes when you are on a slope.

NOTE - “Slope” includes a ramp or hillside. Your wheelchair is less stable when it is at an angle. NEVER use it on a slope unless you are sure it is safe. When in doubt, have someone help you.

Beware of:

1. Steep slopes. DO NOT use this power wheelchair on a slope steeper than 10° (17.6%). See Fig. 3 below.
2. Wet or slippery surfaces (ice, snow, water or oil film). A loss of traction may cause a fall or tip-over.
3. A change in grade on a slope (or a lip, bump or depression). These may cause a fall or tip-over.
4. A drop-off at the bottom of a slope. (A drop-off of as small as 0.75” (20 mm) can stop a front caster and cause the wheelchair to tip forward).

S. TO REDUCE THE RISK OF A FALL, TIP-OVER OR LOSS OF CONTROL:

1. NEVER use your power wheelchair on a slope unless you are sure you can do so without losing traction.
2. ALWAYS go as straight up and as straight down as you can. (See Fig. 4).
   • DO NOT “cut the corner” on a slope or ramp.
   • DO NOT turn or change direction on a slope.
3. ALWAYS stay in the center of the ramp. Make sure ramp is wide enough that you are not at risk that a wheel may roll off the side.
4. Keep your power wheelchair moving at a slow, steady speed. Keep control at all times.
   • On a descent, DO NOT let your power wheelchair accelerate beyond its normal speed.
   • If the power wheelchair picks up speed, center the joystick to slow down or stop.

NOTE - The solid state power module has a logic system that will help control your speed when driving on a slope or uphill.

• Should you be required to stop on a slope, please re-start slowly.

Figure 2. Never try to climb an obstacle greater than 3” (75 mm) with 8” (205 mm) casters.

Figure 3. Do not use powered wheelchair on slope steeper than 10°.

Figure 4. Do not turn on a slope.
**WARNING**

T. RAMPS AT HOME AND WORK

Before driving on a ramp, survey the condition of the ramp. On slippery ramps traction may be reduced causing your wheelchair to slide.

Make sure ramps meet all Building Codes for your area. For your safety, have a licensed contractor build or remodel a ramp to meet all standards.

**NOTE** - The proper design will vary depending on such things as: the length and height of the ramp; the need for an intermediate platform; landing size; doors; and the direction of swing, and; whether the ramp includes a turn or angle.

**WARNING**

U. WHEELCHAIR LIFTS

Wheelchair lifts are used in vans, buses, and buildings to help you move from one level to another.

1. ALWAYS turn off all power to your wheelchair when you are on a lift. If you leave it on, you may touch the joystick by accident and cause your wheelchair to drive off the platform. (Be aware that a “roll-stop” at the edge of the platform may not prevent this).
2. Make sure there is not a lip or drop-off at the top or bottom of the platform. These may cause a fall or tip-over. When in doubt, have someone help you.
3. ALWAYS position the user securely in the wheelchair to help prevent falls while on a lift.
4. Avoid moving forward if a wheel is caught on the lip of the ramp. Back up, reposition the caster for a more direct approach, and slowly try again.

**WARNING**

V. CURBS & SINGLE STEPS

1. It is recommended to ALWAYS use a ramp or a curb cut when climbing and/or descending a curb, single step, or other obstacle.
2. If you must climb or descend a curb, single step, or other obstacle that is greater than 2.5” (65 mm), it is recommended to have a person assist you.
3. NEVER should you try to climb a curb, single step, or other obstacle greater than 3” (75 mm) high. (See Fig. 2 in Section P. OBSTACLES).
4. If you must climb or descend a curb or step alone, do so at your own risk using extreme care and following this procedure:
   - Proceed slowly, at a steady speed
   - Go as straight up or down as you can over the obstacle. (See Fig. 5).
   - NEVER turn when trying to climb or descend an obstacle, doing so may result in a fall or tip-over.
5. Not following the above procedures may cause:
   - A fall or tip-over
   - Damage to the frame, wheels, axles or other parts, or loosen fasteners.

**WARNING**

VI. GENERAL WARNINGS

1. PROHIBITED!

W. STAIRS

NEVER use this power wheelchair to go up or down stairs, even with an attendant. Doing so is likely to cause a fall or tip-over.

**WARNING**

X. ESCALATORS

NEVER take this power wheelchair on an escalator, even with an attendant. Doing so is likely to cause a fall or tip-over.

**WARNING**

NOTE - Using parts or making changes without prior authorization from AMYLOR may create a safety hazard and will void the warranty.

**WARNING**

A. ARMRESTS

Armrests will not bear the weight of this power wheelchair.

**PROHIBITED!**

NEVER lift the wheelchair by its armrests. They may come loose or break.

**WARNING**

B. BATTERIES

ALWAYS wear rubber gloves and safety glasses when you handle batteries.

**PROHIBITED!**

NEVER smoke or hold an open flame near batteries. This is a known explosion hazard.

**WARNING**

C. CUSHIONS AND SLING SEATS

1. Standard foam cushions and other body supports are not designed to relieve pressure.
2. If you suffer from pressure sores, or if you are at risk that they will occur, you may need a special seat system or a device to control your posture.
3. Consult your doctor, nurse or therapist to find out if you need such a device for your well-being.
**WARNING**

**D. FASTENERS**

Many of the screws, bolts and nuts on this power wheelchair are special high-strength fasteners. Use of improper fasteners may cause malfunction.

1. Only use fasteners provided by AMYLOR.
2. If fasteners become loose, tighten them immediately.
3. Over- or under-tightened fasteners may fail or cause damage to parts.
4. See Section VII. SET-UP, ADJUSTMENT & USE, for proper torque settings.

**WARNING**

**E. FOOTRESTS**

1. At the lowest point, footrests should be at least 1 1/4" (32 mm) off the ground. If set too LOW, they may get caught on obstacles you can expect to find normally. This may cause the wheelchair to tip suddenly and tip forward.
2. To avoid a trip or fall when you transfer:
   - Make sure your feet do not get caught on or get caught in the space between the footplates.
   - Avoid putting weight on the foot platform/footplates, as the wheelchair may tip forward.
   - Make sure your feet do not get hooked on or get caught in the space between the footplates.
   - Remove or swing the footrests out of the way, as the wheelchair may tip forward.
3. The foot platform/footplates should ALWAYS be down when operating the wheelchair.

**WARNING**

**F. FREEWHEEL RELEASE LEVERS & BRAKE RELEASE LEVERS**

1. DO NOT engage or disengage freewheel/brake release levers unless power to the wheelchair is off. In addition, make sure both levers are completely engaged before turning the power on to ensure proper control of the wheelchair.
2. Make sure that the person pushing the wheelchair has full control when disengaging the levers because the power wheelchair will not have braking ability.
3. Make sure that the wheelchair is on level ground when levers are disengaged.

**NOTE** - For the freewheel position, to engage or disengage levers, rock the wheelchair back and forth and/or push against the wheelchair while moving the lever.

**WARNING**

**G. ON/OFF SWITCH**

1. NEVER use the ON/OFF switch to stop the power wheelchair except in an emergency. This will result in an abrupt stop, and may cause a fall.
2. To slow your power wheelchair to a stop, return the joystick to neutral.

**WARNING**

**H. PNEUMATIC TIRES**

Proper inflation extends the life of your tires and makes your power wheelchair easier to use.

1. DO NOT use this power wheelchair if any of the tires are under- or over-inflated. Check weekly for proper inflation level, as listed on the tire sidewall.
2. Low pressure in a tire may cause the wheelchair to veer to one side and result in a loss of control.
3. An over-inflated tire may burst.
4. NEVER use a gas station air pump to inflate a tire. Such pumps provide air at high volume, and could cause the tire to burst. To prevent tire damage:
   - Use a hand pump (or low volume air pump) to inflate tires.
   - Use a tire gauge to check pressure.
5. Driving over sharp objects may cause damage to pneumatic tires and tubes.

**WARNING**

**I. POSITIONING BELTS**

Use a positioning belt only to help support your posture. Improper use of such belts may cause severe injury or death.

1. Make sure you are not at risk to slide down in the seat. If this occurs, you may suffer chest compression or suffocate due to pressure from the belt.
2. A pelvic wedge or a similar device can help keep you from sliding down in the seat. Consult your health care professional to find out if you need such a device.
3. The belt must be snug, but must not be so tight that it interferes with breathing. You should be able to slide your open hand, flat, between the belt and your body.
4. Make sure you can easily remove the belt in an emergency.

**WARNING**

**J. PUSH HANDLES**

1. Push handles provide secure points for an attendant to propel and control the power wheelchair. This helps to prevent a fall or tip-over.
2. Check to make sure push handle grips will not rotate or slip off.

**WARNING**

**K. SEATING SYSTEMS**

1. Use of a seating system not approved by AMYLOR may alter the center of gravity of this power wheelchair. This may cause a fall or tip-over.
2. NEVER change the seating system of your wheelchair unless you consult your authorized supplier first.
3. NEVER raise your seating system to a height of more than 22" (560 mm) (measuring from the front of the seat pan to the floor).

**WARNING**

**L. UPHOLSTERY FABRIC**

1. Replace worn or torn fabric of seat sling, seat cushion and seat back as soon as you can. If you do not, the seat may fail and cause you to fall. Worn fabrics may increase the potential for a fire hazard.
3. Be aware that washing may reduce flame retardation of the fabric.

**PROHIBITED!**

NEVER lift this power wheelchair by its footrests/footplates. These detach and will not bear the weight of the wheelchair. Lift it only by non-detachable parts of the main frame.
VII. WARNINGS, COMPONENTS & OPTIONS

M. POWER SEATING

1. Operation:
   - Use caution when operating the power wheelchair in the reclined, elevated, or tilted position.
   - DO NOT attempt to operate power seating options while in motion or positioned on an incline.
   - DO NOT attempt to operate the lift or tilt power seating options around children.
   - Through programming, it is possible to reverse the direction of all power seating functions. Ensure you know which direction your seat is going to move before operating.

2. Reduced speed driving (creep):
   This power wheelchair is designed to automatically reduce the maximum driving speed to a creep mode when equipped with a seat lift. Creep mode is activated when it has reached a maximum limit of 3" (75 mm) of seat elevation or a seat to floor height of 21.25" (540 mm).

3. Pinch points:
   Pinch points may occur when operating power seating options. Ensure all hands and body parts are clear of all power seating components that may result in pinch points before operating them.

4. Tilting power base with push handles:
   DO NOT attempt to tilt the power wheelchairs by pulling down on the push handles. Power wheelchairs have heavy bases. As such, attempting to tilt a power wheelchair to traverse obstacles can damage components in the seating system and/or actuators.

5. Remain clear during power actuator operation:
   Please stay clear of any actuator while it is in motion. Power components move over large travel ranges. Users should be aware of their surroundings while in motion.

6. Maximum user weight:
   DO NOT exceed the weight capacity for your specific power wheelchair/seating system configuration. Doing so could result in premature break down or injury, and will void the warranty of your power wheelchair.

7. Latch mode:
   Use caution while operating power seating function in latched mode. In latch mode, powered seating will not stop until a reverse command is performed, the end of travel is met, or latch times out.

N. CG TILT POWER ACCESSORY

NOTE - (Pinch Point) - Avoid putting hands or fingers near the power tilt mechanism while in operation.

The powered center of gravity (CG) tilt accessory for this power wheelchair has a maximum user weight capacity of 300 lb up to 400 lb (136 kg up to 180 kg) depending on its configuration. NEVER exceed the specified weight capacity for your configuration.

O. 11" POWER ELEVATE ACCESSORY

NOTE - (Pinch Point) - Avoid putting hands or fingers near the power seat lift mechanism while in operation.

The powered lift modular accessory for this power wheelchair has a maximum user weight capacity of up to 300 lb or 400 lb (136 kg or 180 kg) depending on its configuration. NEVER exceed the specified weight capacity for your configuration.

P. POWER RECLINE ACCESSORY

NOTE - (Pinch Point) - Avoid putting hands or fingers near the power recline mechanism while in operation.

The maximum user weight capacity for the power recline is from 300 lb up to 400 lb (136 kg up to 180 kg) depending on its configuration. NEVER exceed the specified weight capacity for your configuration.

Q. POWER ELEVATING LEGREST ACCESSORY

NOTE - (Pinch Point) - Avoid putting hands or fingers near the power elevating legrests or center mount mechanism while in operation.

The power legrest accessory for the ALLTRACK power wheelchair has a maximum user weight capacity of up to 300 lb or 400 lb (136 kg or 180 kg) depending on its configuration. NEVER exceed the specified weight capacity for your configuration.

NOTE - Exceeding specified weight capacity of any of these functions for your power wheelchair configuration can lead to injury and/or damage to the equipment.

VIII. SET-UP, ADJUSTMENT & USE

ADJUSTMENT AND USE

NOTES:

1. Work surface for set-up:
   Use a flat surface, such as a table, to assemble, adjust and check your power wheelchair. This makes the steps easier and helps ensure a correct set-up.

2. Fasteners:
   - Many of the screws and bolts on this power wheelchair are special high-strength fasteners and may have special coatings.
   - Many nuts are of the nylon insert lock nut type. They have a plastic insert to help prevent loosening.
   - Only use screws, bolts and nuts provided by AMYLIOR.

WARNING

1. Use of improper fasteners may cause the power wheelchair to malfunction.

2. Over- or under-tightened fasteners may fail or cause damage to power wheelchair parts.

3. If bolts or screws become loose, tighten them as soon as you can. Loose bolts or screws can cause damage to other parts causing them to fail.

4. Washers and spacers:
   - Note the position of washers and spacers before disassembly.
   - To avoid damage to the frame, replace all washers and spacers when you reassemble parts.

TOOLS YOU WILL NEED

Basic tool kit:
To set-up, adjust and maintain your power wheelchair you may need the following tools:

- Phillips screw driver
- Metric wrenches from 10 mm to 13 mm
- Metric Allen wrenches from 3 mm to 6 mm
- Imperial wrenches from ¾" to 9/16"
- Imperial Allen wrenches from ½" to ¼"
- Imperial socket from 7/16" to ¼"
- Ratchet

NOTE - These tools can be found in common hardware stores.
A. BATTERY REMOVAL  Fig.1-2
Removing the batteries for transporting or servicing:

a) Push tabs together towards the center to release door (A).
b) Drop panel (B).
c) Carefully pull battery pack until cable connection is accessible.
d) Disconnect and pull battery pack to full deployment to remove it.
e) Lift the battery pack from the compartment using the battery carrying straps.
f) Repeat operation in reversed steps to put the batteries back in.

! WARNING

Batteries may weigh up to 55 lb (25 kg) each. Care must be taken to avoid injury when lifting.

B. SWING-AWAY FOOTRESTS  Fig.3-4
1. Installation:
   a) Place legrest pivot pin (C) into the locating hole on top of the receiver with the footrest facing outward from frame.
   b) Rotate the footrest inward until latch plate locks (D) into place.
2. Removal:
   a) To remove footrest, press quick-release lever (E).
   b) Rotate footrest outward and lift (F).
3. Length adjustment:
   a) Remove both bolts (G) in the hanger tube.
   b) Reposition the footrest.
   c) Re-tighten all bolts (G).

C. ELEVATING LEGREST (OPTIONAL)
1. Installation:
   To install or remove elevating legrest (ELR) see instructions for swing-away footrest installation.

D. CENTER MOUNT ADJUSTMENT  Fig.1-2
1. Height adjustment:
   a) Loosen securing bolts (A) with \(\frac{5}{32}\)” Allen key.
   b) Slide footplate to desired height.
   c) Tighten bolts.
2. Calf pad adjustment:
   a) Loosen the securing bolt behind calf pads with \(\frac{5}{32}\)” Allen key.
   b) Move calf pad to desired height.
   c) Tighten bolts.

E. JOYSTICK
Please refer to the input device Owner’s Manual provided with the information package.

F. TO ADJUST THE DEPTH OF THE JOYSTICK  Fig.3
1. Loosen the adjustment handle (B).
2. Slide the joystick mount (C) in or out until the desired position.
3. Retighten the adjustment handle (B).

G. TO USE THE SWING-AWAY FUNCTION  Fig.3-4
1. Push down to release the lever (D).
2. Continue pushing down until the joystick bracket is fully retracted.
3. To bring back, pull the joystick firmly towards you until it gets back into its locked position (D).
H. DUAL POST HEIGHT ADJUSTABLE ARMREST

The dual post flip-back armrest can be used as either a flip-back armrest or a removable armrest.

1. Installing armrest:
   a) Insert front and rear posts (A) into armrest receivers.
   b) Engage lever (B) and insert the rear safety pin (C).

2. Set-up for flip-back operation:
   a) Disengage lever (B) to free front post (A).
   b) Armrest now has the ability to be flipped back without removal.

3. Set-up for removal:
   a) Disengage levers (B) and pull out the rear safety pin (C) to free both front and rear posts (A).
   b) Armrest can now be easily removed for transferring.

4. Height adjustment:
   a) Release the upper securing lever (D).
   b) Set at desired height.
   c) Return securing lever to locked position.
   d) Move armrest up or down to allow armrest to snap into place.

I. CANTILEVER AND RECLINING ARMREST

ADJUSTMENT

Both the cantilever and reclining armrests are height adjustable, but they are not removable.

1. Cantilever armrest adjustment: Fig. 6
   a) To adjust, remove the two bolts (E) behind the armrest with 27/64” wrench.
   b) Reposition in the available holes for desired height.
   c) Retighten bolts (E) on each side.

2. Reclining armrest adjustment on seat frame: Fig. 7
   a) To adjust, loosen screws (F) on the collar behind the armrest, and install and tighten bolt (G) on the vertical tube.
   b) Reposition to the desired height.
   c) Tighten screws (F) on the collar behind the armrest, and install and tighten bolt (G) on the vertical tube.
   d) To release the armrest, press the release lever (H) towards the inside of the wheelchair, then lift.

WARNING

Reinstall bolts and tighten them securely.

J. OPERATING GUIDE

The joystick connects to a power module, which controls the power wheelchair’s performance. The joystick varies based on the option selected for you.

1. R-Net (option)

NOTE - Please refer to the Owner’s Manual provided with information package.

2. VR2 joystick

NOTE - Please refer to the Owner’s Manual provided with information package.

B. JOYSTICK ASSEMBLY

Your Alltrack is equipped with two safety mechanisms which uses a breaker and MIDI style fuses.

NOTE - In the unlikely event of a short circuit or heavy overload, all power to your wheelchair will be shut off. To reset your wheelchair, press the breaker button. Should resetting the breaker not solve the problem, you will need to replace the battery harness which includes the fuses.

To reset the breaker and access the battery harness:
   a) Squeeze tabs together to open the door.
   b) Drop the panel down and pull out the batteries (A).
   c) Reset the breaker or replace the battery harness by following the wiring instructions located inside the battery access door.
   d) Push the batteries back in the compartment.
   e) Lock the panel back in its upright position and make sure the tabs are secured on each side of the battery compartment.

Repeated shutdown:

If the power wheelchair continues to pop the breaker or blow the fuses, please have it serviced by your authorized supplier.
In freewheel position: (Fig. 2)

a) To disengage levers:
Pull lever (B)* toward the back to the neutral position to disengage levers.

b) To engage levers:
Push lever (B)* towards the front to engage the levers and return to the drive position.

*There is one lever for each motor.

NOTE - For freewheel position, if levers are difficult to engage or disengage, rock the wheelchair back and forth and/or push against the wheelchair while moving the lever.

For brake release: (Fig. 2-3)

a) To disengage levers:
Rotate both levers toward the outside (C).

b) To engage levers:
Rotate both levers toward the inside (D).

NOTE - For the freewheel position, if levers are difficult to engage or disengage, rock the wheelchair back and forth and/or push against the wheelchair while moving the lever.

E. LOCKING OR UNLOCKING THE JOYSTICK

To lock with keypad: R-Net and VR2

- While the control system is switched on, depress and hold the on/off button.
- After 1 second the control system will beep. Now release the on/off button.
- Deflect the joystick forward until the control system beeps.
- Release the joystick, there will be a long beep.
- The power wheelchair is now locked.

NOTE - The following screen will be displayed the next time the Control System is switched on.

To unlock with keypad: R-Net and VR2

- Press the power button to turn the power wheelchair on.
- Deflect the joystick forward until the control system beeps.
- Deflect the joystick in reverse until the control system beeps.
- Release the joystick, there will be a long beep.
- The power wheelchair is now unlocked.

F. DISPLAY SETTINGS FOR R-Net COLOR MODELS

- The settings menu is accessed by depressing the Speed Down and Speed Up buttons simultaneously.
- A right joystick deflection will enter the clock adjustment screen.

Set Time >

Display Time <24hr>
Distance >
Backlight <100%>
Background <Blue>
Exit >

- Further joystick deflections are used to set the time and date.

- Once you are done with the settings, just select exit and move the joystick accordingly.

Display time:

- This sets the format of the time display or turns it off.
- The options are 12hr, 24hr or Off. Left and right joystick deflections are used to cycle through the options.
G. PERFORMANCE CONTROL SETTINGS

**NOTE** - Seek advice regarding checking and adjusting settings. It is vital to match control settings to your level of function and ability.

Consult your health care professional and your authorized supplier to select the best control setting for you. For your safety, have the settings on your power wheelchair verified when your environment or level of function and ability change.

**WARNING**

Have your control settings re-adjusted immediately if you notice any change in your ability to:

- Control the joystick.
- Avoid running into objects.

**NOTE** - Control settings are adjusted by your AMYLOR authorized supplier.

H. THERMAL ROLL-BACK

Your power wheelchair has a thermal roll-back circuit. This protects the power module from damage caused by overheating. In extreme conditions (such as repetitive hill climbing), the circuit will decrease the power to your motors. This allows your power wheelchair to operate at a reduced speed. When the power module cools, the wheelchair will return to normal speed.

I. POWER SEATING OPERATION THROUGH THE JOYSTICK

The power tilt, reclining backrest, elevating seat power elevating and articulating center mount or legrest features can be operated using the joystick on your power wheelchair.

1. **6-Key VR2 joystick:**
   (Activates power tilt or seat elevate only)
   ![Image of 6-Key VR2 joystick]
   
   a) For power seating operation through this joystick, you must press the actuator button to access seating options.
   b) Once you have accessed the seating mode on your joystick, you must deflect the joystick backward to activate the power option, and deflect the joystick forward to return to the static mode.

2. **R-Net EL joystick:**
   (Activates multiple power options)
   ![Image of R-Net EL joystick]
   
   a) For power seating operation through this joystick, you must press the mode button to access seating options.
   b) Once you have accessed the seating mode on your joystick, you must deflect the joystick backward to activate the power option, and deflect the joystick forward to return to the static mode.

3. **R-Net color joystick:**
   (Activates multiple power options)
   ![Image of R-Net color joystick]
   
   a) For power seating operation through this joystick, you must press the mode button to access seating options.
   b) Once you have accessed the seating mode on your joystick, you must deflect the joystick backward to activate the power option, and deflect the joystick forward to return to the static mode.
   c) When equipped with lighting option, press the light button to turn on or off.

4. **R-Net advanced joystick with 3.5” screen:**
   (Activates multiple power options)
   ![Image of R-Net advanced joystick with 3.5” screen]
   
   a) For power seating operation through this joystick, you must press the mode button to access seating options.
   b) Once you have accessed the seating mode on your joystick, you must deflect the joystick backward to activate the power option, and deflect the joystick forward to return to the static mode.
   c) When equipped with lighting option, press the light button to turn on or off.

   d) For details on Bluetooth pairing and operation, please review the quick guide document and the PG Manual.
2. DRIVE LOCK-OUT

Drive lock-out is a safety feature designed to prevent the power wheelchair from being driven while in a tilt angle over 15° relative to the horizontal position.

DANGER
Never operate the power wheelchair while in tilt with an angle over 15° relative to the horizontal position. If the drive lock-out does not stop the wheelchair from operating when in a tilt angle over 15°, have it or the power tilt system serviced by an authorized supplier or qualified technician.

3. POWER TILT OPERATION
(Standard operating instructions)

1. SINGLE ACTUATOR TOGGLE SWITCH

Increasing tilt angle
Pull the toggle switch (located next to the wheelchair joystick) backward until the desired tilt angle is achieved, then release.

Decreasing tilt angle
Release the toggle switch to the neutral position for at least 1 second and push the toggle switch (located next to the wheelchair joystick) forward until the desired tilt angle is achieved, then release.

WARNING
Make sure the power wheelchair is on a level surface before proceeding with tilt mode.

K. POWER SEAT ELEVATOR OPERATION
(Standard operating instructions)

1. SINGLE ACTUATOR TOGGLE SWITCH

Increasing seat height
Pull the toggle switch (located next to the wheelchair joystick) backward until the desired height is achieved, then release.

Decreasing seat height
Release the toggle switch to the neutral position for at least 1 second and push the toggle switch (located next to the wheelchair joystick) forward until the desired height is achieved, then release.

WARNING
Make sure the power wheelchair is on a level surface before proceeding with elevate mode.

2. DRIVING IN REDUCED SPEED

Reduced drive speed is a feature designed to allow the user to drive the wheelchair at a reduced speed while lifted up to 11” (280 mm). When elevated, the drive speed is then reduced to 25% of its original setting. Full drive speed is achieved when the seat elevator is down to its lowest position.

DANGER
Never operate the seat elevator when the power wheelchair is on any slope. In reduced speed, the wheelchair must be driven on a level surface. If the reduced speed does not slow the wheelchair’s drive speed to 25% of its original settings, have it or the power seat elevate system serviced by an authorized supplier or qualified technician.
1. POWER TILT/SEAT ELEVATE

COMBO OPERATION
(Standard operating instructions)

**WARNING**
Make sure the power wheelchair is on a level surface before proceeding with either Tilt or Elevate mode and drive in reduced speed while elevated.

Tilt and Seat Elevate options are programmed to operate separately. The ability to tilt while the seat elevator is elevated is not possible. Bypassing this programming may cause severe injury.

1. DUAL ACTUATOR TOGGLE SWITCH

Increasing/decreasing seat height
Pull the toggle switch (located next to the wheelchair joystick) backwards until the desired height is achieved, then release. To change direction, release the toggle switch to the neutral position for at least 1 second, and pull the toggle switch backwards in the same direction until you achieve the desired height, then release.

Increasing/decreasing tilt angle
Push the toggle switch (located next to the wheelchair joystick) forward until the desired tilt angle is achieved, then release. To change direction, release the toggle switch to the neutral position for at least 1 second, and push the toggle switch forward in the same direction until you achieve the desired tilt angle, then release.

2. DRIVING IN REDUCED SPEED

Reduced drive speed is a feature designed to allow the user to drive the wheelchair at a reduced speed while elevated up to 11” (280 mm). When elevated, the drive speed is then reduced to 25% of its original setting. Full drive speed is achieved when the seat elevate is down to its lowest position.

3. DRIVE LOCK-OUT

Drive lock-out is a safety feature designed to prevent the power wheelchair from being driven while in a tilt angle over 15° relative to the horizontal position.

**DANGER**
Never operate the wheelchair while in tilt mode over 15° relative to the horizontal position. Never operate the seat elevate when the wheelchair is on any slope. In reduced speed, the power wheelchair must be driven on a level surface. If the drive lock-out does not stop the wheelchair from operating when in a tilt angle over 15°, or if it allows the seat elevate to elevate while tilted, or if the reduced speed does not slow the wheelchair’s drive speed to 25% of its original settings, have it or the power seat elevate system serviced by an authorized supplier or qualified technician.

M. POWER TILT

OPERATION
(Standard operating instructions)

**WARNING**
Make sure the power wheelchair is on a level surface before proceeding with Tilt mode.

**FOUR-WAY TOGGLE**

Increasing tilt angle
Push the four-way toggle switch forward until the desired tilt angle is achieved and release.

Decreasing tilt angle
To reverse the tilt angle direction, release the four-way toggle switch to the neutral position for at least 1 second and push the four-way toggle switch forward until the desired tilt angle is achieved and release.

**PUSH BUTTON SWITCHES**

Increasing tilt angle
Push the 1st button (furthest from the wire) until the desired tilt angle is achieved and release.

Decreasing tilt angle
To reverse the tilt angle direction, release the 1st button to the neutral position for at least 1 second and push the same button until the desired tilt angle is achieved and release.
TIP LIMIT SWITCH

When equipped with a tilt and power or manual recline combination, your power wheelchair will include a tip switch located inside the shroud, on the right side of the power wheelchair. The purpose of the tip switch is to control the combination of the total tilt/recline angle. This tip switch can be manually turned to change the total tilt/recline angle to a desired or comfortable level for the user. The total tilt and recline angle should never exceed the horizontal plane (180°). Technicians must watch for a possible tilt actuator behind the seat that would reduce the total tilt/recline limit. The total tilt and recline angle should be limited prior to contact between the shroud and the tilt actuator.

WARNING
Make sure the power wheelchair is on a level surface before proceeding with recline mode.

FOUR-WAY TOGGLE

Increasing recline angle
Pull the four-way toggle switch back until the desired recline angle is achieved and release.

Decreasing recline angle
To reverse the recline angle direction, release the four-way toggle switch to the neutral position for at least 1 second and pull the four-way toggle switch back until the desired recline angle is achieved and release.

PUSH BUTTON SWITCHES

Increasing recline angle
Push the 2\textsuperscript{nd} button until the desired recline angle is achieved and release.

Decreasing recline angle
To reverse the recline angle direction, release the 2\textsuperscript{nd} button to the neutral position for at least 1 second and push the same button until the desired recline angle is achieved and release.

Four-way toggle
Move the four-way toggle switch towards the left side of the wheelchair until the desired legrest angle is achieved. To reverse the legrest angle direction, release the four-way toggle switch to the neutral position for at least 1 second and move the four-way toggle switch towards the left side of the wheelchair until the desired legrest angle is achieved.

Push button switches
Push the 3\textsuperscript{rd} button until the desired legrest angle is achieved and release. To reverse the legrest angle direction, release the 3\textsuperscript{rd} button to the neutral position for at least 1 second and push the same button until the desired legrest angle is achieved and release.

Three-way toggle
Move the three-way toggle switch towards the right side of the wheelchair until the desired legrest angle is achieved. To reverse the legrest angle direction, release the three-way toggle switch to the neutral position for at least 1 second and move the three-way toggle switch towards the right side of the wheelchair until the desired legrest angle is achieved.

Push button switches
Push the 4\textsuperscript{th} button (closest to the wire) until the desired legrest angle is achieved and release. To reverse the legrest angle direction, release the 4\textsuperscript{th} button to the neutral position for at least 1 second and push the same button until the desired legrest angle is achieved and release.

WARNING
Make sure the power wheelchair is on a level surface.

INCREASING & DECREASING THE RIGHT LEGREST ANGLE

Four-way toggle
Move the four-way toggle switch towards the left side of the wheelchair until the desired legrest angle is achieved. To reverse the legrest angle direction, release the four-way toggle switch to the neutral position for at least 1 second and move the four-way toggle switch towards the left side of the wheelchair until the desired legrest angle is achieved.

Push button switches
Push the 3\textsuperscript{rd} button until the desired legrest angle is achieved and release. To reverse the legrest angle direction, release the 3\textsuperscript{rd} button to the neutral position for at least 1 second and push the same button until the desired legrest angle is achieved and release.

Three-way toggle
Move the three-way toggle switch towards the right side of the wheelchair until the desired legrest angle is achieved. To reverse the legrest angle direction, release the three-way toggle switch to the neutral position for at least 1 second and move the three-way toggle switch towards the right side of the wheelchair until the desired legrest angle is achieved.

Push button switches
Push the 4\textsuperscript{th} button (closest to the wire) until the desired legrest angle is achieved and release. To reverse the legrest angle direction, release the 4\textsuperscript{th} button to the neutral position for at least 1 second and push the same button until the desired legrest angle is achieved and release.
IX. OPERATING GUIDE

O. POWER ELEVATING FRONT RIGGINGS (CONT.)

(Standard operating instructions)

A. WARNING

Make sure the power wheelchair is on a level surface.

P. ADJUSTMENTS

**SEAT - WIDTH ADJUSTMENT**

Unscrew and remove the 6 to 8 screws located on top of the seat pan with 3/16” Allen key and, then equally adjust the seat width to the desired width and put screws back in place.

**NOTE** - The width adjustment must also be made on the rear cross tubes that hold the back canes and seat laterally. Use a 3/16” Allen key with 7/16” wrench to remove the 2 bolts.

**WARNING**

At all times, the screws holding the seat plates and back canes must be screwed in tightly and securely in order to avoid severe injury and/or damage to the seating system.

**SEAT - DEPTH ADJUSTMENT**

Two seat frames are available that allow for depth adjustment. The short frame range is up to 19” (480 mm) deep and the long frame range is up to 22” (560 mm) deep.

The seat depth can be adjusted in one inch increments on standard rehab seating for all seat frames.

a) To adjust, loosen the three bolts (A) on the backrest pivot plate on each side of the seat with ½” wrench.

b) Remove bolts linking the back to the seat pan.

c) Reposition the seat to the desired position.

d) Retighten bolts on each side of the backrest pivot plate, and tighten the bolts that link the back to the seat pan.

**WARNING**

At all times, the three screws on each side holding the side plates must be screwed in tightly and securely in order to avoid severe injury and/or damage to the seating system.

**BACK - ANGLE ADJUSTMENT**

Using the series of slotted holes provided on each side plate, increase or decrease the back angle by loosening the screw from each side plate and adjust them equally to the desired angle.

a) Remove top securing bolt (B) on the side of the backrest pivot plate with 3/16” Allen key and ½” wrench.

b) Loosen the lower rear bolt (C).

c) Set at desired angle. There are ten holes (in 4° increments) to choose from.

**WARNING**

At all times, the screws on each side holding the main system must be screwed in tightly and securely in order to avoid severe injury and/or damage to the seating system.

**ADJUSTING THE CENTER OF GRAVITY**

Due to the variety of seat measurements and modular power options available on various power wheelchairs, AMYLOR offers many adjustments to meet individual user needs. Proper adjustment of the center of gravity is critical for patient safety and power wheelchair performance. To adjust the center of gravity, unscrew all of the bolts on each side of the main adaptors and adjust the system for optimal performance with ½” wrench.

**WARNING**

At all times, the screws on each side holding the main system must be screwed in tightly and securely in order to avoid severe injury and/or damage to the seating system.

Before delivering an AMYLOR product, the authorized supplier and clinic must verify, while the user is sitting in the seating system, that the center of gravity and overall stability of the power wheelchair is maintained and optimal in all combinations of tilt, recline or elevation.
P. ADJUSTMENTS (continued)

MULTI-AXIS HEADREST

The multi-axis headrest has a pivot ball at the bottom to allow up to 2” (50 mm) of lateral movement. The kit is supplied with additional hardware consisting of nuts and bolts to replace the quick latch system if desired. It also comes with a second vertical bar that can add another 2” (50 mm) of movement in all directions.

NOTE: When pushing the quick latch back in, it should be hard and stiff to close down. It should leave a pressure mark on your palm. If it still moves after that, repeat by tightening the nut, not the latch. The first time it is tightened, usually the star washer on the inside will “break” the paint. The second time, it will be firmly set into the metal and hold well.

If it is still not tight enough, you can use the replacement nuts and bolts supplied with every headrest to lock it into place.

Q. TROUBLESHOOTING GUIDE

FOR POWER SEATING

SYMPTOM | Possible Causes | How to fix this
--- | --- | ---
Nothing works! | No batteries in your wheelchair | Check batteries. Verify all connections. Replace battery cables. Reset the breaker.
24V power cable disconnected | Verify all connections. Verify and replace battery cables.
Fuse is blown | Replace the fuse.
Control switch is defective | Replace the switch.
Bolts have popped | Replace the quick latch system if desired. It also supplied with additional hardware consisting of nuts and bolts to replace the quick latch system if desired.

Actuator is noisy when going up or down | Defective actuator | Make sure the seat is aligned well and doesn’t interfere with the rear of the power lift actuator when tilting. Check for and remove mechanical restraints.
Mechanical restraints | Verify electrical wiring and programming thoroughly.
Defective power module | If problem persists, call AMYLOR technical support for further instructions.
Defective actuator | Verify electrical assembly and programming thoroughly.
| Verify electrical connection assembly and programming thoroughly. If problem persists, call AMYLOR technical support for further instructions.
Cable connected in wrong location | Verify all connections. Verify and replace battery cables. Verify proper mechanical operation of limit switches.
Defective power module | Verify electrical assembly and programming thoroughly.
Defective actuator | Verify all connections. Verify electrical assembly and programming thoroughly.
Tightening nut | Mechanical restraints | Verify electrical wiring and programming thoroughly.
incorrectly placed | Verify electrical assembly and programming thoroughly.
Defective actuator | If problem persists, call AMYLOR technical support for further instructions.
Power burn or breaker trips repeatedly | Mechanical restraints | Verify mechanical assembly and programming thoroughly.
Broken cable in one of the cables | If problem persists, call AMYLOR technical support for further instructions.
Defective power module | Verify electrical assembly and programming thoroughly.
Defective actuator | If problem persists, call AMYLOR technical support for further instructions.

Actuator is going up in one direction | Actuator not connected to power module | Verify electrical wiring and programming thoroughly.
Defective actuator | If problem persists, call AMYLOR technical support for further instructions.
Defective power module | Verify electrical wiring and programming thoroughly.
Cable connected in wrong location | Verify electrical assembly and programming thoroughly.
 chào меня | Verify electrical assembly and programming thoroughly.

Drive lock-out switch, tip switch or reduce drive switch do not work properly | Wrong programming | Verify proper mechanical operation of limit switches.
Wrong programming | Verify electrical assembly and programming thoroughly.
Cable connected in wrong location | Verify electrical assembly and programming thoroughly.
Defective power module | Verify electrical assembly and programming thoroughly.
Defective actuator | If problem persists, call AMYLOR technical support for further instructions.
Tightening nut | Verify electrical wiring and programming thoroughly.
Defective actuator | If problem persists, call AMYLOR technical support for further instructions.
Defective power module | Verify electrical wiring and programming thoroughly.
Cable connected in wrong location | Verify electrical assembly and programming thoroughly.
Defective actuator | If problem persists, call AMYLOR technical support for further instructions.

X. BATTERIES

A. INTRODUCTION

1. Notes -
   • Batteries supply the power for your wheelchair. They carry a finite amount of energy and have limits on how long they can store and supply energy.
   • You can charge batteries only a certain number of times before they will fail and no longer hold a charge.
   • For answers to questions about batteries, consult your authorized supplier.

2. Use proper batteries -
   • Your power wheelchair operates on two 12 volt deep cycle, AGM- or gel-type batteries.
   • They should be Group 24 (or 22NF) size with a minimum of 50 ampere hour rating. Only deep cycle sealed case construction batteries should be used in this device.
   • When you buy a replacement, insist on a deep cycle sealed case type. DO NOT use a car starter battery.

3. Breaking in -
   • A battery requires “breaking-in” for the first 6 to 12 charges. It will not accept a full charge for this period.
   • It is best to limit the length of your trips until you break the batteries in and you know the range of your power wheelchair.

4. Discharged batteries -
   • NEVER allow a battery to completely discharge. If you operate your power wheelchair until it has almost stopped, you will greatly reduce the life of your batteries.
   • NEVER let a battery sit in a discharged condition. Give unused or stored batteries a full charge once per month.
   • ALWAYS fully charge the batteries. Avoid “topping off” with frequent charges.

WARNING

NEVER connect a life support or auxiliary device to a power wheelchair battery. The electrical system may fail, and result in severe injury or death of user.

B. BATTERY CHARGER

A battery charger produces a direct current (DC). When applied to a discharged battery, this reverses the chemical reaction that led to its discharge.

1. Charge rate. How fast a battery will charge depends on:
   • Its electrical capacity, state of charge, electrolyte temperature, and internal condition.
   • The DC output of the charger (The charge rate will vary if the alternating current (AC) supply is higher or lower than 110 volts).

2. Caution — To avoid damage to the charger:
   • NEVER place the charger on top of a battery during charging. (Gases from the battery can damage the charger and may lead to an explosion or fire).
   • NEVER place a battery on top of the charger.
   • NEVER expose charger to rain or snow.
   • NEVER unplug charger by pulling on the electrical cord. This will damage the cord.
   • NEVER open a charger or attempt to repair it yourself. Return a defective charger to your authorized supplier.
   • Keep cord out of the way, where it will not be stepped on, tripped over, or damaged.

3. Caution — To avoid damage to the battery:
   • Make sure you use the correct setting for sealed (gel) batteries (located on the off-board charger).
   • NEVER charge a frozen battery. A fully charged battery will rarely freeze, but the fluid in a discharged battery can freeze at 16° Fahrenheit (minus 9° Centigrade). If you suspect a battery is frozen, thaw it before charging.

WARNING

Lead acid batteries generate explosive gas while charging. Completely read and follow all warnings on batteries in this Owner’s Manual and any labels applied to the product. Not doing so, could result in fire, explosion, injury and/or death.

NOTES
**XI. MAINTENANCE**

### A. NOTES

1. **Proper maintenance will improve performance and extend the life of your power wheelchair.**
2. **Clean your power wheelchair regularly. This will help you find loose or worn parts and will make it easier to use.**
3. **To protect your investment, have all major service and repair work done by your authorized supplier.**

### WARNING

1. **Your power wheelchair needs regular maintenance** for peak performance and to avoid injury from break down, damage or premature wear.
2. **Inspect and maintain this power wheelchair strictly per the Maintenance Chart on page 41.**
3. **If you detect a problem, make sure to service or repair the power wheelchair before use.**
4. **At least once a year, have an authorized supplier service your power wheelchair and perform a complete safety check.**

### B. CLEANING

1. **Paint finish:**
   - Clean the paint finish with mild soapy water monthly.
   - Protect the paint with a coat of non-abrasive auto wax every 6 months.
2. **Motors:**
   - Clean around motor area weekly with a slightly damp (not wet) cloth.
   - Wipe off or blow away any fluff, dust, or dirt on or around the motors.
3. **Upholstery:**
   - Drip-dry only. Heat from a dryer may damage fabric.

### WARNING

1. **Note - You do not need to grease or oil any part of the power wheelchair except as specified in this Owner’s Manual.**

### C. DISINFECTING

Many disinfecting products are commercially available and must be used as per the manufacturer’s instructions. Before using on the wheelchair, test on a small area to ensure the disinfection product is compatible with the wheelchair materials.

**NOTE** - AMYLIOR takes no responsibility for the effectiveness of the disinfecting process, for contamination, cross infection or damage to the product.

### D. STORAGE TIPS

1. **Store your power wheelchair in a dry, clean area.** If you do not, parts may rust or corrode.
2. **Before using your power wheelchair, make sure it is in proper working order. Inspect and service all items according to the Maintenance Chart on page 41.**
3. **If you store this power wheelchair for more than three months, have it inspected by an authorized supplier before use.**

### WARNING

1. **Store your power wheelchair in a clean, dry area.** If you do not, parts may rust or corrode.
2. **Before using your power wheelchair, make sure it is in proper working order. Inspect and service all items according to the Maintenance Chart on page 41.**
3. **If you store this power wheelchair for more than three months, have it inspected by an authorized supplier before use.**

### E. BATTERY MAINTENANCE

1. **Maintenance schedule:**
   - This varies for different types of batteries. ALWAYS follow instructions supplied with your batteries.
   - **Note -** ALWAYS wear rubber gloves and safety glasses when you handle or service batteries.
2. **Corrosion:**
   - Check battery terminals often for corrosion.
   a) If corrosion is present, use a wire brush to clean the terminals.
   b) Use baking soda to neutralize acid.
   c) Use petroleum jelly (Vaseline) to re-grease the terminals after connecting cable to battery. (Completely cover the terminal nut and bolt, cable clip and any exposed cable with jelly).
3. **For answers to questions:**
   - Contact your authorized supplier.
**F. PNEUMATIC TIRES**

1. DO NOT use this power wheelchair if any of the tires are under- or over-inflated.
2. Low pressure in a tire may cause the power wheelchair to veer to one side and result in loss of control.
3. An over-inflated tire may burst.
4. NEVER use a gas station pump to inflate a tire. Such pumps provide air at high volume, and may cause tire to burst.
5. Check weekly for signs of wear and correct air pressure in pneumatic tires.
6. For best performance, inflate tires at a maximum pressure level, as shown on the tire sidewall.

**CAUTION**

To prevent tire damage:

- Use a hand pump (or a low volume air pump) to inflate tires. Use a tire gauge to check pressure.

**WARNING**

**G. TO REPAIR OR REPLACE A TIRE**

Residual air pressure in tires can cause severe injury. Make sure you release all air in tire before attempting to service or repair tires.

1. 6” (135 mm) caster wheels:
   a) Remove caster wheel from fork using a ½” (12 mm) wrench.
   b) Remove four bolts from rim using a #3 Phillips screwdriver. Separate two halves of rim.
   c) Replace tire.
   d) Reassemble the caster wheel making sure the bearing spacer is in place and all four bolts are well tightened.
   e) Mount caster wheel onto fork. Install washers correctly, and tighten bolts.
2. 14” and 12.5” drive wheels:
   a) Elevate and securely support power wheelchair so that wheel is off the ground. Release all air from tire.
   b) Remove four (4) lug nuts from rim using a 5/8” socket wrench.
   c) Make sure all air has been removed from tire. Remove the eight bolts inside the rim with a 5 mm Allen key. Separate two halves of rim.
   d) Repair or replace inner tube. Reassemble the wheel.
   e) Inflate tire to proper pressure level (Shown on tire sidewall).

**H. HOW TO CHANGE CASTERS FORKS**

1. With flat head screwdriver, gently remove dust cover.
2. Using a ¾” socket, remove top nylon lock nut.
3. Remove all parts and pull fork downwards.

**NOTE** - Be sure to remove all residue before reinstalling parts. It is strongly recommended to replace all parts at the same time. NEVER use any kind of lubricant or grease in the fork housing.
4. Reinstall parts.

**NOTE** - It is important to ensure that the two Igus tension washers are installed back-to-back as shown in the illustration below. Only this configuration provides the proper pressure on the fork stem.
5. Tighten nylon lock nut.
6. Replace dust cover.

**I. MAINTENANCE CHART**

Ensure that all items on the list below are performed according to frequency indicated. If any of the items are loose, worn, bent or distorted, immediately have them checked and/or repaired by your authorized AMYLOR supplier. Frequent maintenance and servicing will improve performance, extend power wheelchair life, and help prevent injuries.

**J. ORDERING PARTS**

When you order parts, provide the following:

1. Model of power wheelchair,
2. Serial number,
3. Left hand or right hand control,
4. Part number, description and quantity of parts you need,
5. State reason for replacement,
6. User weight and height.
XII. AMYLIOR - LIMITED WARRANTY

GENERAL WARRANTY INFORMATION

1. LIMITED WARRANTY

From the date of first customer purchase only, AMYLIOR will repair or replace, free of charge, parts deemed defective in material and/or workmanship by AMYLIOR according to the schedule below.

- Five (5) years: main frame, seat frame, seat frame mounting brackets and power module mounting brackets. (See note #1)
- One (1) year: charger, joystick, specialty controls, electrical harnesses, breaker assembly, activation switches, motor/gearbox assembly, power seat modules, accessories, front riggings, armrests, caster forks, power modules, actuators and batteries. (See note #1)
- Six (6) months: bearings and bushings. (See note #1)
- Ninety (90) days: upholstery and seating, pads (all types), plastic or rubber parts and painted surfaces due to poor adhesion. (See notes #1 & #2)

NOTE #1 - WARRANTY EXCLUSIONS:
Exclusions also include components with damage caused by:
- Physical damages due to impacts;
- Contamination;
- Abuse, misuse, accident, or negligence;
- Commercial use, or use other than normal;
- Improper operation, maintenance, or storage;
- Gradual deterioration in performance caused by the battery being left in a discharged state, left in cold conditions for an extended period of time, or worn out through heavy use or abuse.

NOTE #2 - WARRANTY EXCLUSIONS:
This warranty only covers to defective parts in material and/or workmanship and does not cover components which are required to be replaced after normal wear and tear:
- ABS plastic shredds;
- Motor brushes;
- Tires and tubes;
- Upholstery and seating;
- Pads (all types);
- Painted surfaces;
- Circumstances beyond the control of AMYLIOR;
- Labor, service calls, shipping, and other charges incurred for repair of the product, unless PRIOR authorization by AMYLIOR;
- Repairs and/or modifications made to any component without specific consent from AMYLIOR.

2. REPLACEMENT PARTS LIMITED WARRANTY

PARTS AVAILABILITY

AMYLIOR will make every effort to supply parts for five (5) years after a product has been discontinued. In the event that a supplier can no longer provide the original part, or a replacement part option, steps will be taken to ensure a satisfactory resolution to the issue on behalf of all parties involved. Please visit AMYLIOR’s website at www.amylior.com under Support/Parts Manual for current, serviceable and discontinued parts and assemblies on specific models.

LIMITED WARRANTY

AMYLIOR warrants any spare parts sold by AMYLIOR for use in any of AMYLIOR power wheelchairs, and any replacement parts used in repairs performed by an authorized AMYLIOR supplier, to be free from defects under proper use and maintenance according to the Owner’s Manual, warnings and instructions accompanying the product.

The warranty covering spare or replacement parts shall begin on the date the spare or replacement part is first shipped and invoiced to the customer. Not complying with printed instructions, warnings and notices in this Owner’s Manual or those indicated on your AMYLIOR product, may not only result in personal injury or product damage, but it will void the AMYLIOR product warranty.

NOTE #3 - WARRANTY EXCLUSIONS:
Exclusions also include components with damage caused by:
- Physical damages due to impacts;
- Contamination;
- Abuse, misuse, accident, or negligence;
- Battery fluid spillage or leakage;
- Commercial use, or other than normal use;
- Improper operation, maintenance, or storage;
- Gradual deterioration in performance caused by the battery being left in a discharged state, left in cold conditions for an extended period of time, or worn out through heavy use or abuse.

NOTE #4 - WARRANTY EXCLUSIONS:
This warranty only covers to defective parts in material and/or workmanship and does not cover components which are required to be replaced after normal wear and tear:
- ABS plastic shredds;
- Motor brushes;
- Tires and tubes;
- Upholstery and seating;
- Pads (all types);
- Painted surfaces;
- Circumstances beyond the control of AMYLIOR;
- Labor, service calls, shipping, and other charges incurred for repair of the product, unless PRIOR authorization by AMYLIOR;
- Repairs and/or modifications made to any part without specific consent from AMYLIOR.

3. REGULATORY REQUIREMENTS

PARTS AVAILABILITY

AMYLIOR takes its regulatory responsibility seriously. According to Health Canada, FDA, EU MDR regulations regarding Complaint Handling, AMYLIOR requires that all products be sent back for proper evaluation. This means that for any repair/replacements claims you may have, you will be requested to send the product back to AMYLIOR each and every time.

4. RETURNS POLICY

NOTE - In order to process your return as efficiently as possible, and prevent delays on possible credits, please carefully follow the instructions below:

GENERAL RETURNED GOODS

Products may be returned to AMYLIOR only with prior authorization from AMYLIOR Customer or Technical Support in the form of a Return Material Authorization (RMA) number.

TECHNICAL SUPPORT

T/F Phone: 1 888 453-0311
Direct or international: +1 450 424-0288

USA
AMYLIOR
178 West Service Rd.
Champlain NY 12919

CANADA
AMYLIOR
3190 F.-X.-Tessier
Vaudreuil-Dorion QC J7V 5V5

If you are an authorized supplier, all requests for a Return Material Authorization (RMA) must include the following:

- Reason for return;
- Item number (part ID) and quantity;
- At least one of the following references: invoice number, original sales order number or packing slip number;
- Original purchase order number and date;
- Serial number(s) if applicable.

The Return Material Authorization (RMA) number must clearly be visible on the outside of the package. All approved returns must be shipped at authorized supplier’s expense using their preferred carrier. Returns will not be accepted by AMYLIOR if items are not returned within 180 days after the RMA has been issued.
LABOR FEE
Labor fee is $100.00 per hour.
All replacement/repair work on a product, whether covered under warranty or not, are subject to a labor fee.
If a product is returned for warranty consideration but AMYLOR’s evaluation shows that the components requiring repair/replacement is a result of customer abuse, a quote for parts and labor will be submitted for approval.
Under no circumstances will product be returned to an authorized supplier if any component is deemed to be unsafe. Safety issues must be resolved before the product can be shipped back.

5. PRODUCT FOR RESTOCK
NOTE - All of the information in GENERAL RETURNED GOODS section above applies.
Returns for restock will be accepted by AMYLOR if the product is returned beyond 180 days of the original shipping date.
Custom-made wheelchairs/products (Custom-Zone) and custom Deluxe CG Air Cushions are not eligible for return regardless of order date.
Product must be saleable (i.e. not a discontinued or used item) and must be properly packaged. Product/part returns which are not approved will not be accepted by AMYLOR.
Restocking merchandise is subject to a restocking fee.

RESTITOCKING FEES
Product/part returns for warranty (i.e. product defects) are subject to an AMYLOR evaluation but not subject to a restocking fee.
Products or parts returns for non-warranty items (e.g. authorized supplier error, overstock) are subject to AMYLOR evaluation and are subject to a restocking fee based on the following schedule:
• Non-warranty orders shipped within 90 days of request for return authorization are subject to a 20% restocking fee.
• Non-warranty orders shipped beyond 90 days but within 180 days of request are subject to a 30% restocking fee.
• Restocking fee amounts are calculated based on the invoiced value of the product.

XIII. DISCLAIMER AND WARRANTY
This warranty is extended only to the original purchaser/user of our products.
This warranty gives you specific legal rights and you may also have other legal rights which vary from state to state.

1. DISCLAIMER
AMYLOR does not claim any therapeutic effectiveness from its products, but does claim its products to be safe.

2. LIMITED WARRANTY
This warranty does not include any labor or shipping charges incurred in replacement part installation or repair of any such product. AMYLOR’s sole obligation and your exclusive remedy under this warranty shall be to repair and/or replacement.

The sole obligation of AMYLOR under this warranty shall be to repair or replace any components which are found to be defective.
For warranty service, contact the authorized supplier from which the system was purchased. The purchase (user) of the product is responsible for returning the product to the authorized supplier.

Any defective component, once replaced under warranty, shall become the property of AMYLOR. If further service is required, please contact AMYLOR at 1 888 453-0311 or +1 450 424-0288.
DO NOT return products to our factory without our prior consent.

3. LIMITATIONS AND EXCLUSIONS
The foregoing warranty shall apply only to the original purchase and shall not apply to serial numbered products if the serial number has been removed or defaced, products subjected to negligence, accident, improper operation, maintenance or storage, commercial or institutional use, products modified without AMYLOR’s express written consent (including, but not limited to, modification through the use unauthorized parts or attachments; products damaged by reason of repairs made to any component without the specific consent of AMYLOR, or to a product damaged by circumstances beyond AMYLOR’s control, and such evaluation will be solely determined by AMYLOR).

3. LIMITATIONS AND EXCLUSIONS
The foregoing warranty shall apply only to the original purchase and shall not apply to serial numbered products if the serial number has been removed or defaced, products subjected to negligence, accident, improper operation, maintenance or storage, commercial or institutional use, products modified without AMYLOR’s express written consent (including, but not limited to, modification through the use unauthorized parts or attachments; products damaged by reason of repairs made to any component without the specific consent of AMYLOR, or to a product damaged by circumstances beyond AMYLOR’s control, and such evaluation will be solely determined by AMYLOR).

The warranty shall not apply to problems arising from normal wear or for not following the instructions in this Owner’s Manual.

The foregoing warranty is exclusive and in lieu of all other expressed warranties. IMPLIED WARRANTIES, if any, including the implied warranties of merchantability and fitness for a particular purpose, shall not extend beyond the duration of the expressed warranty provided herein and the remedy for violations of any implied warranty shall be limited to repair or replacement of the defective product pursuant to the terms contained herein. AMYLOR shall not be liable for any consequential or incidental damages whatsoever.

Some jurisdictions do not allow the exclusions or limitation of incidental or consequential damages, or limitation on the length of an implied warranty. Local laws should be reviewed to determine if the above exclusions and limitations apply.

4. ACCIDENTS AND EXTRAORDINARY EVENTS POLICY
Quality is one of our company’s most important priorities and we strive to ensure that our products and services live up to our high standards. However, if certain extraordinary events occur to our wheelchairs, we cannot guarantee the continued performance or safety of our product.

AMYLOR cannot guarantee the continued performance or safety of its products that are subject to acts of God or nature, including but not limited to water, floods or fire, or involved in automobile accidents or extraordinary impact events, such as dropping or crushing. Such extraordinary events to a sophisticated medical device may create considerable damage that may be imperceptible to an inspection. Any damage caused by these incidents exceed the limitations covered by the manufacturer’s warranty.

RETURN GOODS FOR REPAIRS
NOTE - All of the information in GENERAL RETURNED GOODS section above applies.
If you are the end-user of the product, your return must go through an authorized AMYLOR supplier. Please contact the authorized supplier who supplied you with the product.
All seating components must be returned inside sealed plastic bags.
All products returned for evaluation must be cleaned and disinfected (using suitable commercial cleaning product) prior to shipping to AMYLOR.
Replacement products sent out by AMYLOR, are billed to the recipient and later credited if the returned product is approved for warranty coverage following AMYLOR’s evaluation.

In order for AMYLOR to ship a replacement product, the authorized supplier must provide a PO number for tracking purposes.

SHIPPING AND HANDLING FEE
All approved returns must be shipped at the authorized supplier’s expense using his preferred carrier. Cost of shipping replacement products is paid by AMYLOR.

SHIPPING AND HANDLE FEE
All approved returns must be shipped at the authorized supplier’s expense using his preferred carrier. Cost of shipping replacement products is paid by AMYLOR.

SHIPPING AND HANDLE FEE
All approved returns must be shipped at the authorized supplier’s expense using his preferred carrier. Cost of shipping replacement products is paid by AMYLOR.

SHIPPING AND HANDLE FEE
All approved returns must be shipped at the authorized supplier’s expense using his preferred carrier. Cost of shipping replacement products is paid by AMYLOR.

SHIPPING AND HANDLE FEE
All approved returns must be shipped at the authorized supplier’s expense using his preferred carrier. Cost of shipping replacement products is paid by AMYLOR.
